Chockfast Red HF being Pumped

Compressor Skid Owners Count on Energy Tech Systems

ITW Engineered Polymers has recently developed a brand new formulation of epoxy grout that can be both easily pumped or poured. It is called **Chockfast Red HF** and is the most unique epoxy grout on the market today.

The pictures show a large compressor skid package being pump-grouted with **Chockfast Red HF**. HF is highly flowable and easily self levels. It also has the longest working time of any competitive epoxy grout on the market.

This makes **Chockfast Red HF** ideal for large, hard to access grout placements such as skid mounted machinery. Like all our 3 component grouts, **Chockfast Red HF** has a low dust aggregate making a less hazardous and cleaner grout environment.
