Major Defense Contractor Counts on Energy Tech Systems

Energy Tech Systems, Inc. supplied their new **Chockfast Red HF** (High Flow) epoxy grout to support the rail base plates of a new gantry crane being installed at an east coast shipyard.

Chockfast Red HF is ITW Engineered Polymers newest grout. Developed 5 years ago, **Chockfast Red HF** is designed for thin, low access grout pours requiring excellent flow characteristics.

Another uniquely engineered feature of HF is its' very long working time and gentle cure cycle.

Warm weather grouting projects pose problems when hotter, fast curing competitive grouts are used. Hot weather applications are no problem for **Chockfast Red HF!**
